

# 4

## important factors to consider when selecting your whole house water conditioning system:

### NO SALT!

With Green Treat Water™ systems, there's no need to regenerate the media. This means salt is not required; there's no discharge to drain; and you save time and money!

### NO wasted water!

Our "flow through" systems do not need backwashing, so water is not wasted. This saves thousands of gallons per year, compared to conventional systems.

### NO electricity!

Green Treat Water™ systems are easy to install using our simple "in and out" heads. The installation is simple with easy plumbing and no need for electrical power.

### Easy installation!

Green Treat Water™ systems are easy to install using our simple "in and out" valves. And no electrical power or drain is needed!

Green Treat Water™ systems are assembled in the United States by Safeway Water, LLC. We offer a complete line of water quality improvement equipment. We are respected members of the Water Quality Association and Better Business Bureau.

Safeway Water dealers are water treatment professionals and are trained to analyze your water and recommend treatment methods to improve your water quality. For more information, please contact the authorized Safeway Water dealer listed below:

Good for YOU!

## Two tank system for whole house water filtration and conditioning!

## Here's how it works:

**Tank 1:** The process starts in tank #1, where harmful chemicals that may be in your water are reduced using our NSF certified activated carbon.

### Tank #1 Treats / Removes:

- ✓ Harmful chemicals
- ✓ Chlorine
- ✓ Bad Tastes
- ✓ Odors

**Tank 2:** The final water treatment process occurs in tank #2, where our Green Treat Water media provides treatment for scale control and prevents hard water scale formation.

This treatment protects appliances, such as hot water heaters, dishwashers, coffee makers and ice machines.

## Get high quality water from every tap in your house, plus scale control to protect plumbing fixtures and your hot water appliances!

- ✓ Provides dual treatment for whole house filtration and scale control.
- ✓ Removes chlorine, taste, odors and organic chemicals.
- ✓ NO salt required.
- ✓ No need to lug salt home from the store!
- ✓ NO backwash!
- ✓ NO drain needed!
- ✓ NO wasted water!
- ✓ NO electricity!
- ✓ NO electrician required!
- ✓ Simple installation

## How the Green Treat Water® anti-scale media works!

The underlying principle of the Green Treat Water media is based on the technology called *seed crystallization*. This process converts Calcium and Magnesium ions into millions of microscopic Calcium Carbonate "seed crystals". These minute crystals dramatically reduce the potential for scale formation because they are so small they travel with the flow and do not attach to surfaces.

The Green Treat Water media outperforms other anti-scale materials because our media's surface is coated with these crystalline substrates, allowing the media to attract more dissolved hardness ions, for greater efficiency.

### Two tank models (whole house filtration and scale control)

Model Number	Tank Size	Service Flow Rate (GPM)	Scale Control	Whole House Filtration
GTW-2-10	8x44	10	Yes	Yes
GTW-2-20	9X48	20	Yes	Yes

Note: Systems come with in-out heads, by-pass and 1" pipe fittings.

### Single tank models (scale control)

Model Number	Tank Size	Service Flow Rate (GPM)	Scale Control
GTW-1-10	8x44	10	Yes
GTW-1-20	9X48	20	Yes

Note: Systems come with in-out heads, by-pass and 1" pipe fittings.

Good for the environment...

Good for YOU!

**Green Treat Water systems are available from Safeway Water dealers.**

### SPECIFICATIONS:

Green Treat Water systems are designed for municipal and community water applications. In well water, pre-treatment for Iron, Hydrogen Sulfide, Copper and hydrocarbons is required. Pressure vessels are NSF certified, and maximum pressure is 125 psi. Maximum temp. is 120F. Green Treat Water anti-scale media is NSF Standard 61 certified.
